

# Instant Auditing of Cloud Storage Access without Evidence Cached

Adviser : Gwan-Hwan Hwang

Student : Wei-Chih Chien

NTNU CSIE CCLAB

2015.12.31

# Outline

## 1 Scenario

## 2 Real-time Auditing Schemes

- Intuitive Method
- Instant Auditing of Cloud Storage Access by Cache Partial Merkle tree
- My Method

## 3 Protocol Detail

- Flowchart
- Initial
- Read
- Write
- Audit

## 4 Schedules

## 5 Experimental Results

## 1 Scenario

## 2 Real-time Auditing Schemes

- Intuitive Method
- Instant Auditing of Cloud Storage Access by Cache Partial Merkle tree
- My Method

## 3 Protocol Detail

- Flowchart
- Initial
- Read
- Write
- Audit

## 4 Schedules

## 5 Experimental Results

# Scenario

## Why Real-time Auditing?

# Scenario (CON'T)

## Version Control

# Scenario (CON'T)

## Problem

Cryptography Proof Needed

# Outline

## 1 Scenario

## 2 Real-time Auditing Schemes

- Intuitive Method
- Instant Auditing of Cloud Storage Access by Cache Partial Merkle tree
- My Method

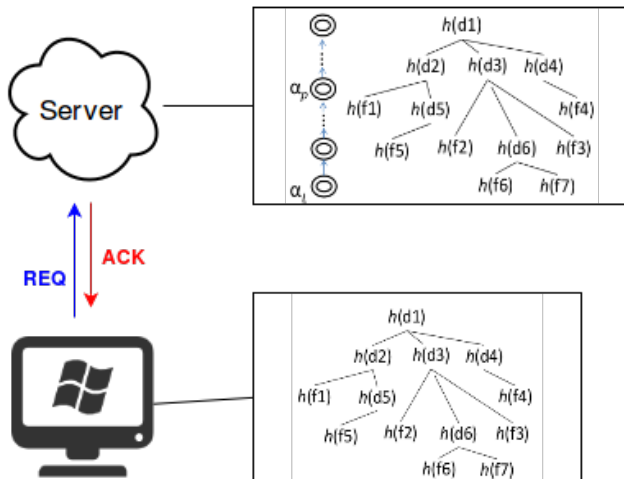

## 3 Protocol Detail

- Flowchart
- Initial
- Read
- Write
- Audit

## 4 Schedules

## 5 Experimental Results

# Intuitive Method

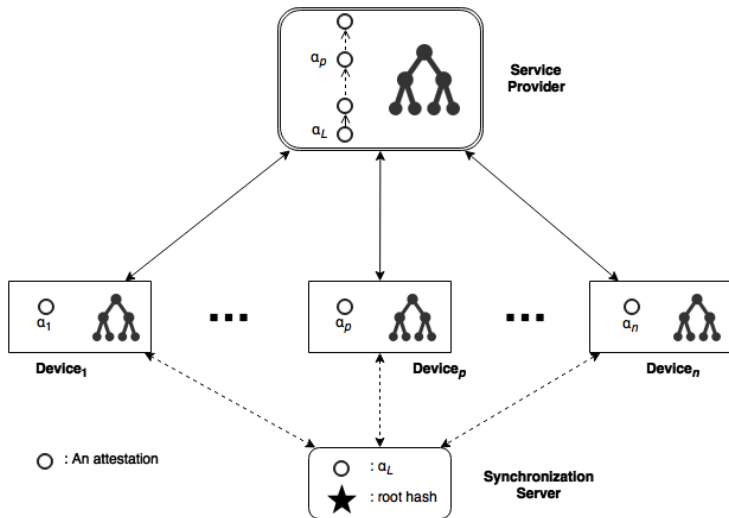

# Problem

# Instant Auditing of Cloud Storage Access by Cache Partial Merkle tree

2014 IEEE 6th International Conference on Cloud Computing Technology and Science

# Worse-case

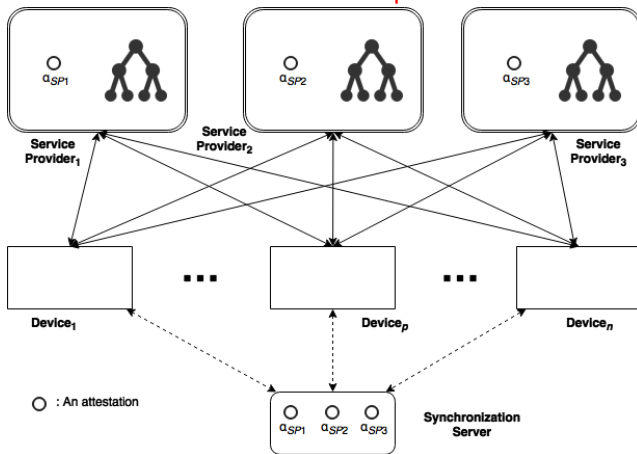

因為要更新client端的Merkle Tree, 累積太多版本就需要很多時間來更新

# My Method

Assumption: 同時有 $k$ 個server上同一file出問題的機率 $\approx 0$

Service Providers are Independent Cloud

- Pros

- ① Device 不用存 Merkle Tree, 省空間
- ② Device 也不用同步 Merkle Tree, 省時間
- ③ 資料有多份備份
- ④ 平均比之前的方法快速, 且沒有 Worse-case

- Cons

- ① 硬體成本較高
- ② 需要處理多份 Response

# Outline

## 1 Scenario

## 2 Real-time Auditing Schemes

- Intuitive Method
- Instant Auditing of Cloud Storage Access by Cache Partial Merkle tree
- My Method

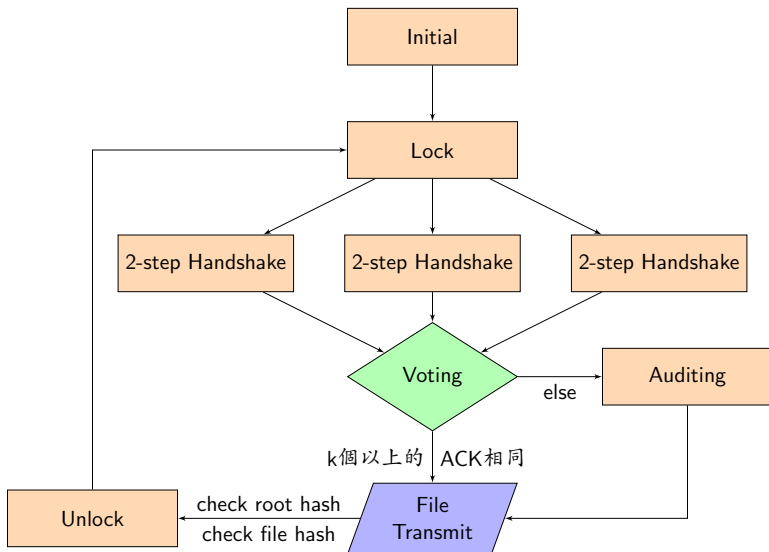

## 3 Protocol Detail

- Flowchart
- Initial
- Read
- Write
- Audit

## 4 Schedules

## 5 Experimental Results

# Flowchart

## Create Merkle Tree

# READ

## I. 2-step Handshake & Voting

**REQ = (op, [op]<sub>pri(D)</sub>)**

**ACK = (result, REQ, [result, REQ]<sub>pri(S)</sub>)**

# READ

## II. Download

# WRITE

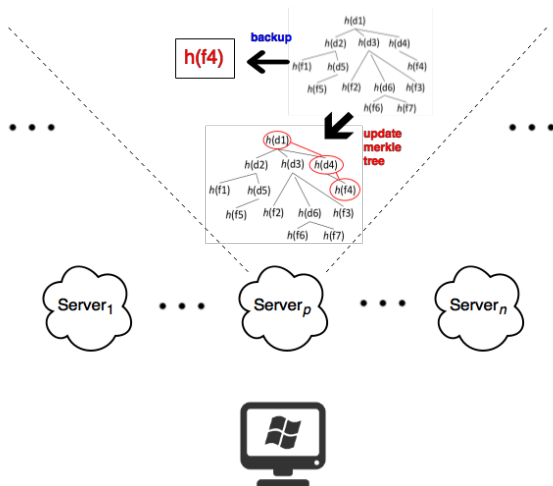

## I. Upload

$$REQ = (op, [op]_{pri(D)})$$

# WRITE

## II. Update Merkle Tree

# WRITE

## III. Voting

**$ACK = (result, REQ, [result, REQ]_{pri(s)})$**

# AUDIT

- 1 Device 向 **Synchronization Server** 取得 Latest Ack.
- 2 Device 再向 **Service Provider** 取得 前一版本的 Merkle Tree.
- 3 使用 Step I. 的 Ack 包含的檔案 Hash 值來更新 Step II. 的 Merkle Tree.

- 4 比較 Device 自己算出的 Roothash 值是否和 Server 提供的相同.

# Outline

## 1 Scenario

## 2 Real-time Auditing Schemes

- Intuitive Method
- Instant Auditing of Cloud Storage Access by Cache Partial Merkle tree
- My Method

## 3 Protocol Detail

- Flowchart
- Initial
- Read
- Write
- Audit

## 4 Schedules

## 5 Experimental Results

## ① My Method Finished.

- Merkle Tree Implements.
- Operation Handle (Read, Write and Audit).
- File Transmit.
- Object Transmit (Serialization).
- Synchronization Server Implements.

## ② Wei-Shian's Method Finished.

- Acknowledgement Chain Implements.

## ③ Question: Read Operation slower than Write Operation

## ④ Design Different Experiments.

# Outline

## 1 Scenario

## 2 Real-time Auditing Schemes

- Intuitive Method
- Instant Auditing of Cloud Storage Access by Cache Partial Merkle tree
- My Method

## 3 Protocol Detail

- Flowchart
- Initial
- Read
- Write
- Audit

## 4 Schedules

## 5 Experimental Results

# Experimental Results

Table : THE EXECUTION TIME OF FOLLOWING OPERATIONS (IN MS)

Account A		666MB	42files	6dirs.	
Test Data	1KB	10KB	100KB	1MB	10MB
<b>Non POV</b>					
READ	0.72	0.519	0.471	1.766	13.417
WRITE	1.086	0.651	1.891	3.172	16.426
<b>Wei Chih</b>					
READ	2.575	13.94	3.047	5.353	40.18
WRITE	3.354	2.79	3.608	9.376	65.731
<b>Wei Shain</b>					
READ	1.982	1.756	3.325	6.477	40.606
WRITE	1.708	2.046	3.67	4.834	16.574

Thank  
You!
